

Imaging Engineer: Tuning - Motorola Mobility (A Google company)

Basic Qualifications - Years of Experience: 5+years

Scope of Responsibility/Expectation:

The candidate would own the tuning process, determine tuning targets, perform the tuning, and guide the evaluation and validation of the tuning.

The goal would be a consistent user experience across products. The candidate would also assist in the evaluation and selection of vendor ISP offerings as well as explore internal opportunities to differentiate our products from the competition.

Specific Knowledge/Skills:

Detailed understanding of sensor characteristics, lens capabilities, functionality of Image Signal Processors, and user preferences. The candidate should also have a detailed understanding of the tuning process, the decisions and tradeoffs common to the tuning process, and how Software development effects the tuning process.
