

Imaging Engineer: Camera ISP - Motorola Mobility (A Google company)

Basic Qualifications - Years of Experience: 5+years

Scope of Responsibility/Expectation:

The candidate would be responsible for all aspects of the design and development of image signal processing algorithms, including algorithm development, implementation and validation. They would be expected to develop algorithms that provided industry leading image quality and support the analysis and debug of issues, implementation of continuous improvement, and generation of new and novel techniques to solve image quality problems.

Specific Knowledge/Skills:

The candidate should have an understanding of the human visual system, and user perception. They should also understand camera system design and capabilities and the requirements resulting from implementing image signal processing in a mobile environment.
