

Image Permanence Institute at RIT

We are looking for a new student employee from imaging science to work this Spring on our new grant-funded project studying the preservation of digitally printed materials. All applicants must be familiar with basic color measurement and be proficient with Adobe CS and Microsoft Office (especially Excel). The work will primarily involve printing, preparing, and measuring test samples for our various experiments. It will require about 10 hours per week which must be done during IPI normal working hours. This is probably more of an undergraduate level position than graduate.

Interested applicants should send their resume (with grade point average) to Nino Gordeladze at nxgpph@rit.edu
