

Advanced tech company seeking versatile, talented remote sensing scientist

Advanced technology company operating a next generation image capture platform seeks exceptional remote sensing scientists to join our team in either Pennsylvania or Colorado. Remote sensing has historically been a tool exclusive to large corporate or government users as providers have been able to deliver it at a price, convenience and usability necessary to become applicable to a broader segment of the marketplace. The company is seeking scientists to help develop and refine innovative remote sensing products for multiple industries - ranging from agriculture to utilities to energy to natural resource management. Talented, hardworking candidates should send their CVs to careers@farmcrisp.com with a brief cover note.
