

Aaron Courville is an Assistant Professor in the Department of Computer Science and Operations Research (DIRO) at the University of Montréal and is a member of MILA (Montreal Institute for Learning Algorithms). His current research interests focus on the development of deep learning models and methods. He is particularly interested in developing algorithms for multimodal machine learning and generative models. While he has mainly focused on applications to computer vision, he is also interested in other domains such as natural language processing, audio signal processing, and just about any other AI-related task. In 2016, together with Ian Goodfellow and Yoshua Bengio, he published a book titled "Deep Learning" (MIT press). His research is supported by a Microsoft Research Award as well as a Google Focused Research award.
